

CURRENT RATINGS

Compiled from BS 7671: 2008 Requirements
for Electrical Installations: IEE Wiring Regulations
17th Edition and ERA Reports 69-30
Part III and Part V

The following cable ranges
are covered in this publication:

General wiring cables
Flexible cables and cords
XLPE armoured cables
Mineral insulated cables
Firetec fire performance cables
Protec cables

SAFETY WARNING

IN ORDER THAT ELECTRIC CABLE IS SAFE AND POSES NO RISK TO HEALTH, IT SHOULD BE INSTALLED IN ACCORDANCE WITH BS 7671 (IEE WIRING REGULATIONS, 17TH EDITION).

Installation should only be carried out by suitably qualified and approved persons, in accordance with the IEE on site guide and the IEE guidance note material.

Current carrying capacity for 60°C rubber and 90°C rubber insulated flexible cables to BS 7919

Conductor	Current carrying capacity and associated voltage drop							
	60°C rubber insulated			90°C rubber insulated*				
	C.S.A.	1 two-core cable* or 2 single core cables touching [†]	1 three-core, four-core or five-core cable	1 two-core cable* or 2 single core cables touching [†]	1 three-core, four-core or five-core cable	d.c. or single phase a.c.	three phase a.c.

630	861	0.068d 0.185a	-	-	1190	0.074d 0.190a	-	-

Notes:

- The tabulated current ratings are for cables in free air but may also be used for cables resting on a surface.
- These ratings are not applicable to cables wound on reeling drums or covered over or coiled up. Refer to Table 4F2A Notes 2 & 3 of BS 7671.
- Where the conductor is to be protected by a semi-enclosed fuse to BS 3036, see item 5.1 of the preface to Appendix 4 of BS 7671.
- Two-core only up to and including 25mm². Single-core ratings for 25mm² and above.
- Larger voltage drop will result if the cables are spaced.
- Where a conductor operates at a temperature exceeding 70°C it shall be ascertained that the equipment connected to the conductor is suitable for the conductor operating temperature. [See BS 7671 Regulations 512.1.2]

Correction Factors

For Alternative Ambient Temperatures

60°C rubber insulated cables

Ambient Temperature 25°C 30°C 35°C 40°C 45°C 50°C 55°C

Correction Factor 1.04 1.0 0.91 0.82 0.71 0.58 0.41

90°C rubber insulated cables

Ambient Temperature 35°C 40°C 45°C 50°C 55°C 60°C 65°C 70°C 75°C 80°C 85°C

Correction Factor 0.95 0.91 0.86 0.82 0.76 0.70 0.64 0.57 0.50 0.40 0.28

E. & O.E.

Current carrying capacity and associated voltage drop for thermoplastic (PVC) insulated and sheathed flat cable with protective conductor

BS 6004

Conductor operating temperature: 70°C Ambient temperature: 30°C
For installations required to comply with BS 7671

Conductor	Reference method 100 (above a plasterboard ceiling covered by thermal insulation not exceeding 100mm in thickness)	Reference method 102 (in a stud wall with thermal insulation with cable touching the inner surface wall)	Reference method 103 (in a stud wall with thermal insulation with cable not touching the inner surface wall)	Reference method C (clipped direct)	Reference method A (enclosed in conduit in an insulated wall)	Voltage drop	mm ²	A	A	A	A	A	A	mV/A/m
							mm ²	A	A	A	A	A	A	mV/A/m
1	13	10.5	13	8	16	11.5	44							
1.5	16	13	16	10	20	14.5	29							
2.5	21	17	21	13.5	27	20	18

Where more precise calculations require the use of resistive and reactive components of cable impedance, reference should be made to Table 4D1B of BS 7671.

Notes:

- Where the conductor is to be protected by a semi-enclosed fuse to BS 3036, see item 5.1 of the preface to Appendix 4 of BS 7671.
- The current carrying capacities in columns 2 & 4 are also applicable to flexible cables to BS 6004 Table 1 (c) where the cables are used in fixed installations.
- Spacings larger than those specified in Method C (Table 4A) will result in a larger voltage drop.

Correction Factors

For Ambient Temperature

Where more precise calculations require the use of resistive and reactive components of cable impedance, reference should be made to Table 4E1B of BS 7671.

Notes:

- Where the conductor is to be protected by a semi-enclosed fuse to BS 3036, see item 5.1 of the preface to Appendix 4 of BS 7671
- The current carrying capacities in columns 2 & 4 are also applicable to flexible cables to BS 7211 Table 3 (b) where the cables are used in fixed installations.
- Spacing larger than those specified in Method C (Table 4A) will result in a larger voltage drop.
- Where these cables are installed in rigid PVC conduit, the current carrying capacities for PVC insulated cables to Table 4D1A of BS 7671 should be used.

Correction Factors

Where a conductor operates at a temperature exceeding 70°C it shall be ascertained that the equipment connected to the conductor is suitable for the conductor operating temperature (see Regulation 512.1.2 of BS 7671).

E. & O.E.

Current carrying capacity and associated voltage drop for mineral insulated copper sheathed cables

BS EN 60702 Part 1:2002 Sheath temperature: 70°C

Ambient temperature: 30°C For installations required to comply with BS 7671

Associated Voltage Drop

Conductor C.S.A.	Voltage drop	
	Single phase	Three phase
mm ²	mV/A/m	mV/A/m
1.0	42	36
1.5	28	24
2.5	17	14
4.0	10	9.1
6.0	7	6
10.0	4.2	3.6
16.0	2.6	2.3
25.0	1.65	1.45

Note:

- 1 Current ratings and volts drop values are for single phase operation, for three and four core cables: values are for three phase operation. They are based on Tables 4G1A and 4G1B of the 17th edition of the IEE Wiring Regulations (BS 7671), Method C (Clipped Direct) and Method E (Cable installed on a perforated cable tray) as indicated.

Size of fuse element composed of tinned copper wire for use in semi-enclosed fuses

Nominal current of fuse element	Nominal diameter of wire
A	mm
3	0.15
5	0.20
10	0.35
15	0.50
20	0.60
25	0.75
30	0.85
45	1.25
60	1.53
80	1.80
100	2.00

Spacing of supports for cables in accessible positions

Overall diameter of cable*	Maximum spacing of clips			
	Non-armoured rubber, PVC or lead sheathed cables		Armoured Cables	
	Horizontal†	Vertical†	Horizontal†	Vertical†
Not exceeding 9	250	400	-	-
Exceeding 9 and not exceeding 15	300	400	350	450
Exceeding 15 and not exceeding 20	350	450	400	550
Exceeding 20 and not exceeding 40	400	550	450	600

* Taken as the measurement of the major axis, in the case of flat cables.

† The spacings stated for the horizontal runs may be applied also to runs at an angle of more than 30° from the vertical. For runs at an angle of 30° or less from the vertical, the vertical spacings are applicable.

For the spacing of supports for cables of overall diameter exceeding 40mm and for single core cables having conductors of nominal area 300mm² and larger, the manufacturer's recommendations should be observed.

For a number of reasons, for instance as a result of improvements in design, in methods of manufacture or experience in the use or as permitted by the relevant British Standards specification, the products as supplied at any one time may differ from the descriptions given in this publication.
